Subject: Microsoft is a rip-off

I care about my security while I am on the internet. It costs just too much to buy a windows operating system, and when I buy it I have to deal with viruses and no protection, the only way I can fix those problems is to buy third-party software. It costs even more, like the virus scanners, protection programs etc. I dont know why should anyone put up with those issues. I got linux free and very well secured and all the software free. I demand microsoft to be like linux, so that everyone will be happy.
